Условие:

Задача СИ20-ДР-22.

а) Решете уравнението

$$y' = \frac{4}{x-3}y - \frac{(x-3)^3}{x+4}.$$

б) Напишете MATLAB код, които решава числено задачата на Коши за това уравнение с начално условие y(1) = 1 в подходящ интервал и изчертава графиката на намереното приближение на решението й. Приложете резултата от изпълнението на кода.
